Professional Summary

AI/ML-focused Computer Science undergraduate with 3 internships and 6 self-built projects spanning full stack development, LLM engineering, RAG pipelines, and Generative AI systems, having shipped production-oriented Python/REST solutions with measurable results – 90% reliability gains, 20% data-quality improvement, and 15% fewer false positives across 15,000+ records – and a adaptable across LLM engineering in AI-assisted engineering workflows, to bring high-ownership software engineering to a fast-paced team.

Education

Vellore Institute of Technology

B.Tech in Computer Science and Engineering (AI & ML) | 8.40/10 CGPA *Sep 2023 – March 2027*

Professional Experience

LLM Post-Training Intern, Ethara.ai Feb 2026 – june 2026

- Tuned LLMs for video workflows via Supervised Fine-Tuning (SFT) and RLHF across multiple training iterations, evaluating outputs to mitigate logical hallucinations and improving model precision by 90%.
- Designed an LLM-driven prompt system for a color picker, running iterative prompt-design cycles that boosted high-accuracy user selections by 40%.

Machine Learning Engineer Intern, CodSoft Nov 2025 – Dec 2025

- Engineered 3 scalable, production-style Python pipelines (Fraud, Spam, Churn) processing 15,000+ records end-to-end, improving data quality by 20% via automated Pandas preprocessing and validation.
- Optimized Random Forest classifiers across successive hyperparameter sweeps., cutting false positives by 15% and raising detection reliability to 94% on the full dataset.

Projects

VoiceHealth GitHub

- Devised a React Native (Expo) Android app using Gemini 1.5 Flash native audio understanding to log health data from a single spoken sentence, cutting manual data entry to 0 steps.
- Designed a multi-intent extraction pipeline parsing 4 health categories (hydration, sleep, habits, nutrition) from 1 voice input, with instant conversational voice feedback.
- Implemented a dynamic NativeWind dashboard with 3+ live-updating visual trackers, backed by Supabase for structured, synced cloud data storage.

InterviewIQ GitHub

- Developed a full-stack mock interview platform ,with 3 interview modes generating tailored questions by parsing a candidate's resume with Gemini AI.
- Shipped a technical round with an embedded Monaco code editor for live coding, time-complexity analysis, and automated JSON-based grading, plus a behavioral round using multi-turn STAR-method conversation.
- Architected 3 enterprise proctoring controls (copy-paste block, tab-switch detection, cheat-strike logging) and a recruiter dashboard with results persisted in SQLite for ongoing candidate scoring.

SignBridge GitHub

- Deployed a real-time sign-language video-call web app using SocketIO, and WebRTC for peer-to-peer video between 2 users per room.
- Trained a MediaPipe hand-landmark classifier to detect sign-language gestures active during calls, with real-time on-screen display of detected signs.
- Implemented a speech-to-sign feature via the Web Speech API mapping spoken words to sign images, alongside a room-based create/join system with camera and mic controls.

Technical Skills

Foundational CS: Data Structures & Algorithms (DS&A), Object-Oriented Programming (OOP), Operating Systems, Computer Networks, DBMS, Asynchronous Logic, Database Design (SQL & NoSQL), Query Optimization
Programming Languages: Python, C++, SQL, HTML/CSS
Generative AI & LLM Engineering: LangChain, LangGraph, Retrieval-Augmented Generation (RAG), Prompt Engineering, Agentic AI Workflows, Vector Databases, Embedding-Based Retri, LLMOps
Data analytics & Web Development: FastAPI, Flask, RESTful APIs,React.js, Express.js,Node.js,Next.js,TensorFlow, Scikit-learn, Pandas, NumPy, Power BI
Testing & Validation: Test-Driven Development (TDD), Unit Testing, PyTest, Code Auditing, Bug Forensics
DevOps & Cloud: CI/CD Pipelines, Docker, Git, Cloud Platforms (AWS EC2, S3, Azure, GCP), System Observability, Low-Latency Inference, Caching Strategies, Agile

Certifications & Achievements

Certifications (4): Machine Learning in Python (UMich), Google IT Support Professional, NPTEL Cloud Computing (Top 5%), Oracle OCI AI/GenAI
Hackathons (2): EY Techathon 6.0 (Top 100 teams nationally out of 5000+), Adobe Hackathon (Top 50 team nationally out of 6000+), Tata imagination challenge(qualified round 2)
